Digital Literacy Project

Name:Tushar Yadav , Registration Number: 25BAI11329, Branch: B.Tech CSE (AI & ML) Year: 1st Year ,Course Code: CSE0001

Date: March 29, 2026

Introduction

This project focuses on building digital literacy and essential online skills required for students in today's technology-driven world. It encompasses practical knowledge of digital tools, online communication, and cybersecurity awareness. The goal is to establish a professional digital identity and learn how to use the internet responsibly as a college student.

Project Tasks & Implementation

Task 1: Infographic Creation

Designed a digital infographic titled "Navigating the Digital World" using Canva.

The design presents key topics including Artificial Intelligence, Digital Transformation, Data Privacy, and the Power of Connectivity.

The infographic highlights essential skills that every student should develop to succeed in today's digital world.

Task 2: Digital Portfolio Setup

Created professional profiles across key platforms to build an online presence:

GitHub: Set up to host assignments and personal projects, building a consistent commit history.

LinkedIn: Created to build a professional identity, connect with peers and industry professionals, and track technology trends.

Stack Overflow: Established as a community-driven resource for asking technical questions and sharing programming solutions.

Task 3: Platform Exploration & Data Collection

Google Forms: Created a comprehensive “Digital Literacy Awareness Quiz” consisting of five questions to assess peer understanding of online safety.

Google Sheets: Integrated to automatically capture responses, enabling structured data analysis and filtering across the batch.

CodeChef: Completed a module test in Strings (C++ and Java), achieving a 66% skill score to demonstrate core programming logic.

Task 4: Email Etiquette Case Study

Analyzed the consequences of poor digital communication through a case study of a student sending an informal, unclear email without a proper subject line.

Highlighted the importance of maintaining proper email etiquette, such as using a clear subject line and a respectful tone to ensure messages are taken seriously.

Task 5: Cybercrime Awareness

Researched simple but convincing online scams, particularly phishing and UPI frauds.

Explored how attacks trick users through fake links or messages rather than requiring advanced technical skills.

Committed to safer digital habits, including verifying sources before clicking unknown links and avoiding sharing sensitive information.

Tools & Platforms Used

Canva: Used for creating the infographic design.

GitHub: For building and showcasing the project portfolio.

LinkedIn: For creating a professional online profile.

Stack Overflow: For technical problem-solving and knowledge sharing.

Google Forms & Sheets: Utilized for survey creation and data collection.

Conclusion

This project successfully demonstrated proficiency in using modern cloud-based tools for educational assessment and professional branding. By covering key areas like digital literacy, online safety, and professional presence, these tasks have built practical competencies that are essential for future endeavours in the technology sector.
