Project Report:-Digital literacy

Name:- Tushar Yadav

Reg No:-25BAI11329

Branch:-CSE(AI & ML)

Year:-1st Year(2025)

Course code:-CSE0001

Date:-26-03-2026

INTRODUCTION

This project focuses on building digital literacy and essential online skills required for students in today's technology-driven world. Throughout the tasks, I created and managed professional profiles on platforms like GitHub, LinkedIn, and Kaggle to develop my online presence and portfolio. I also designed an infographic using Canva to explain key concepts such as digital literacy, useful tools, safe internet practices, professional presence, and email etiquette. Additionally, I explored cybersecurity topics by creating a phishing case study and a prevention checklist, which helped me understand real-world online threats and safety measures.

Overall, this project enhanced my practical knowledge of digital tools, online communication, and cybersecurity awareness. It also helped me realize the importance of maintaining a professional digital identity and using the internet responsibly as a college student.

Task 1-Infographic

I created a digital infographic titled "The Digital Survival Kit for Students" using Canva, a free and easy-to-use online design tool. The infographic presents five important topics: digital literacy, useful digital tools for students, safe internet practices, professional online presence, and email etiquette. Each section includes four short and clear points, making the information easy to understand at a glance. I used icons, headings, and a balanced color scheme to make the design visually appealing and organized.

The infographic highlights essential skills that every student should develop to succeed in today's digital world. It explains how to use digital tools effectively, stay safe online, maintain a professional image, and communicate properly through email.

One challenge I faced was arranging all five topics neatly without making the design look crowded. Managing spacing and choosing the right icons took some time. However, I found it interesting to explore Canva's features and experiment with layouts and colors to create an attractive and informative design.

Task 2-Digital Portfolio

I created profiles on GitHub, LinkedIn, and Kaggle as part of this task. GitHub is widely used by developers to host and manage code repositories. I plan to use it to upload my projects, practice programming, and build a strong portfolio that showcases my skills over time. LinkedIn is a professional networking platform where individuals connect, share achievements, and explore career opportunities. I will use LinkedIn to build my professional identity, connect with peers and industry professionals, and stay updated with current trends in technology. Kaggle is a platform focused on data science and machine learning, providing datasets, notebooks, and competitions. As a CSE student specializing in AI and ML, I will use Kaggle to practice data analysis, participate in competitions, and enhance my practical knowledge. Over the next four years, I aim to actively update these profiles with my progress, projects, and achievements to improve my skills and career opportunities.

Task 3-Platforms

I completed this task using HackerRank and Google Forms. On HackerRank, I solved a beginner-level problem which helped me understand basic programming logic and problem-solving techniques. It also gave me hands-on experience in writing and testing code in an online environment. For collaboration, I created a Google Form titled "Digital Literacy Awareness Quiz" consisting of five questions, including multiple-choice and short-answer types. This form can be used to assess basic awareness about online safety and digital practices among students. I also explored how responses are automatically collected and organized in Google Sheets, which is useful for data analysis. These tools will help me academically by

improving my coding skills, logical thinking, and ability to work with digital platforms. In the coming years, I plan to regularly practice coding problems on HackerRank and use Google Forms for surveys, quizzes, and data collection in projects and coursework.

Task 4-Email Etiquette

Poor digital communication can often lead to misunderstandings and serious consequences. For example, a student once sent an email to a professor requesting help but used an informal tone, unclear language, and no proper subject line. The professor misunderstood the urgency and ignored the email, assuming it was not important. As a result, the student missed a deadline and lost marks. This situation could have been avoided by following proper email etiquette, such as writing a clear subject line, using a respectful tone, and explaining the issue concisely. Including all necessary details and maintaining professionalism would have ensured that the message was taken seriously. This highlights the importance of clear and respectful digital communication, especially in academic and professional environments.

Task 5- Cybercrime

While researching cybercrime, I was most surprised by how simple and convincing online scams, especially phishing and UPI frauds, can be. Many attacks do not require advanced technical skills but rely on tricking users through fake links, messages, or calls that appear genuine. It was alarming to learn how easily people, including students, can become victims due to a lack of awareness or urgency in responding. I also realized that small mistakes, such as clicking unknown links or sharing OTPs, can lead to serious financial and personal loss. As a result of this research, one habit I will change is being more cautious before clicking on any link or responding to unknown messages. I will always verify the source and avoid sharing sensitive information online. This awareness will help me stay safer in the digital world.

Conclusion

In conclusion, this infographic project helped me understand the importance of digital skills in a student’s academic and professional journey. By covering key areas like digital literacy, online safety, useful tools, professional presence, and email etiquette,

I was able to combine both knowledge and creativity into a single visual representation. It not only improved my awareness of responsible digital behavior but also enhanced my ability to present information in a clear and engaging way.

Overall, this task strengthened my practical skills in using design tools like Canva and taught me how to organize information effectively. These skills will be useful in future academic projects and professional work, helping me communicate ideas more efficiently in the digital world.
